

Dental implants

Dental implants offer you a more secure alternative for replacing teeth

If you have to replace a tooth or require dentures, dental implants may be a solution to keep a youthful healthy smile.

What is implant treatment?

Dental implants are permanent replacements for dental roots. This treatment is based on a biological process known as osseointegration, which means that the implant integrates with the patient's jawbone. Implants have been used successfully since the 1960's.

Dental implants restore confidence in your smile

If you wear full or partial dentures or are simply missing a tooth, dental implants can permanently restore the space. Patient satisfaction is high because they look and feel completely natural. Implants give people back the confidence to smile and eat comfortably once again.

Who will treat me and help me restore my smile?

At the dental clinic Simon and Stuart have both completed the certificate of implantology at the prestigious Eastman Dental Hospital and have a Masters Degree in Restorative Dental Practice. They are both qualified to plan cases and surgically place implants. However, more advanced cases, for example patients who require bone grafting procedures, will be planned jointly and carried out by our visiting specialist and surgeon, Dr. Carl Manhem.

Dental implants – restoring a solid foundation

A dental implant acts as an artificial root for your missing tooth. The implant is made out of Titanium which is one of the few materials accepted by our body. Once the artificial root is placed in your mouth it bonds with your jaw bone becoming strong and secure just like the real root of a tooth. Once the implant is securely fixed, a crown or restoration is secured on top of the implant. The result is a tooth anchored in your mouth that looks and feels natural.

If you have any further questions about your treatment before it begins, or throughout its course, then please ask one of our team who will be only too happy to help you.

Implant treatment is responsible for helping ease the suffering of tooth loss in many thousands of patients every day. The treatment is reliable and effective and not only restores smiles but can improve your quality of life.
