

Cosmetic dentistry

Crowns

Porcelain crowns are the perfect permanent restoration when a tooth is severely damaged, decayed or compromised aesthetically. Crowns are made of natural looking porcelain and are made to improve your overall smile or to blend in with your own teeth. Sometime an underlying metal shell is used under the porcelain if additional strength is needed. Crowns strengthen and protect the remaining natural tooth structure and can improve the appearance of your teeth.

Each type of porcelain crown is handcrafted by our dental laboratory to mimic your natural teeth and to ensure maximum light translucency and colour.

Veneers

Preferred by many of our patients, porcelain veneers can provide the lasting result of a smile makeover. Many cosmetic dental problems, such as chipped, gapped, stained, aged or misaligned teeth can be permanently resolved with porcelain veneers. They are probably the most aesthetic means of creating a more pleasing and beautiful smile.

Veneers require a minimal amount of tooth reduction and are therefore a more conservative restoration than a crown. Porcelain veneers allow us to alter tooth position, shape, size and colour. They are not the only alternative for all aesthetic abnormalities but are truly a remarkable restoration when they are the treatment of choice.

Porcelain veneers can be as strong as your own teeth when bonded into place. They can also help resist future discolouration and chipping. They make a dramatic difference to your smile and self-esteem. We pride ourselves in creating the most natural looking porcelain veneer restorations possible. The benefits of porcelain veneers are many and they include the fact that they are more stable and longer lasting than regular bonding techniques and do not require excessive dental preparations.

White fillings

Most people have fillings of one sort or another in their mouths. Nowadays fillings are not only functional, but can be natural looking as well. Many people don't want silver fillings that show when they laugh or smile because they are more conscious about the way they look.

White fillings can be colored matched to your teeth for perfect aesthetic results.

Teeth whitening

If you have always wanted to go shades whiter with your teeth because you find yourself feeling self-conscious when smiling or talking to people then whitening your teeth can get you smiling with confidence again.

If your teeth have become stained or if they have always been discoloured, whitening can transform their colour quickly, painlessly and with no damage to the enamel.

Brilliant, white teeth give you an appealing smile and a healthy and refined appearance. They reflect self-confidence, youth and vitality.

How does it work?

Whitening works by applying a specially formulated bleaching gel to the enamel of your teeth. This gel acts on the tooth structure to lighten the colour without damaging the tooth in any way.

Clear and comfortable custom made trays are fabricated to accurately fit over the teeth and the whitening gel is applied in the trays. These are then worn for a short time each day or overnight for approximately two weeks.

Each bespoke treatment is tailor made to provide the best results for you

If you have been hiding your teeth from family and friends then why not talk to your dentist about teeth whitening.
